Blind people's tactile measuring cup

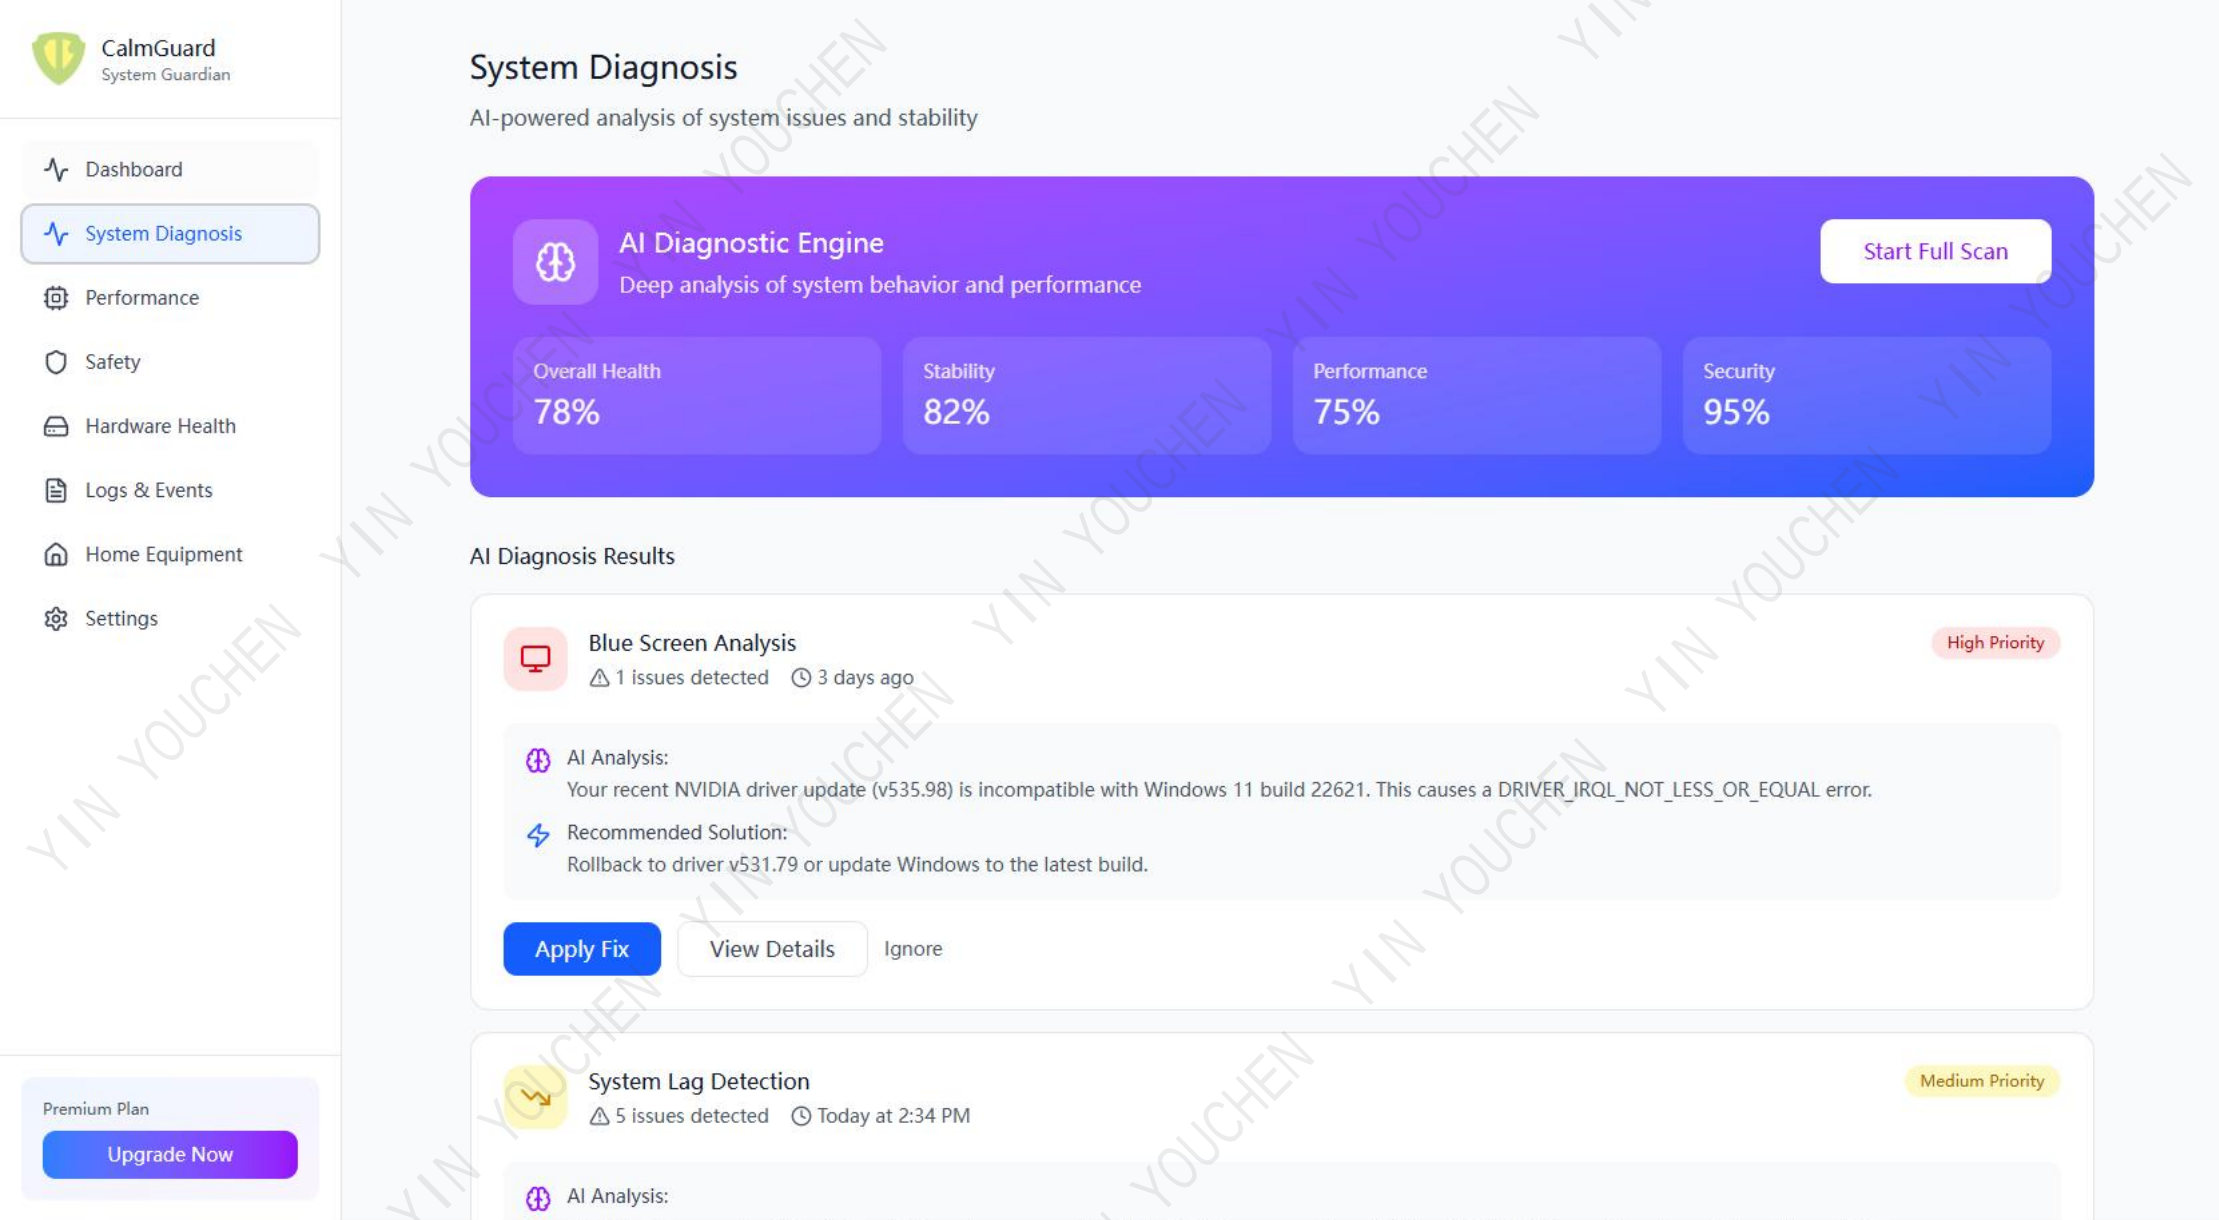

The inspiration for this design comes from visually impaired friends' actual behavior of judging capacity by touching liquids in their daily lives. Many blind people gently touch the liquid surface while pouring water or cooking to sense height and temperature, but this method carries risks of burns or inaccuracies. Based on this observation, this design aims to continue the natural habit of "replacing vision with touch" in a safer and more controlled manner.

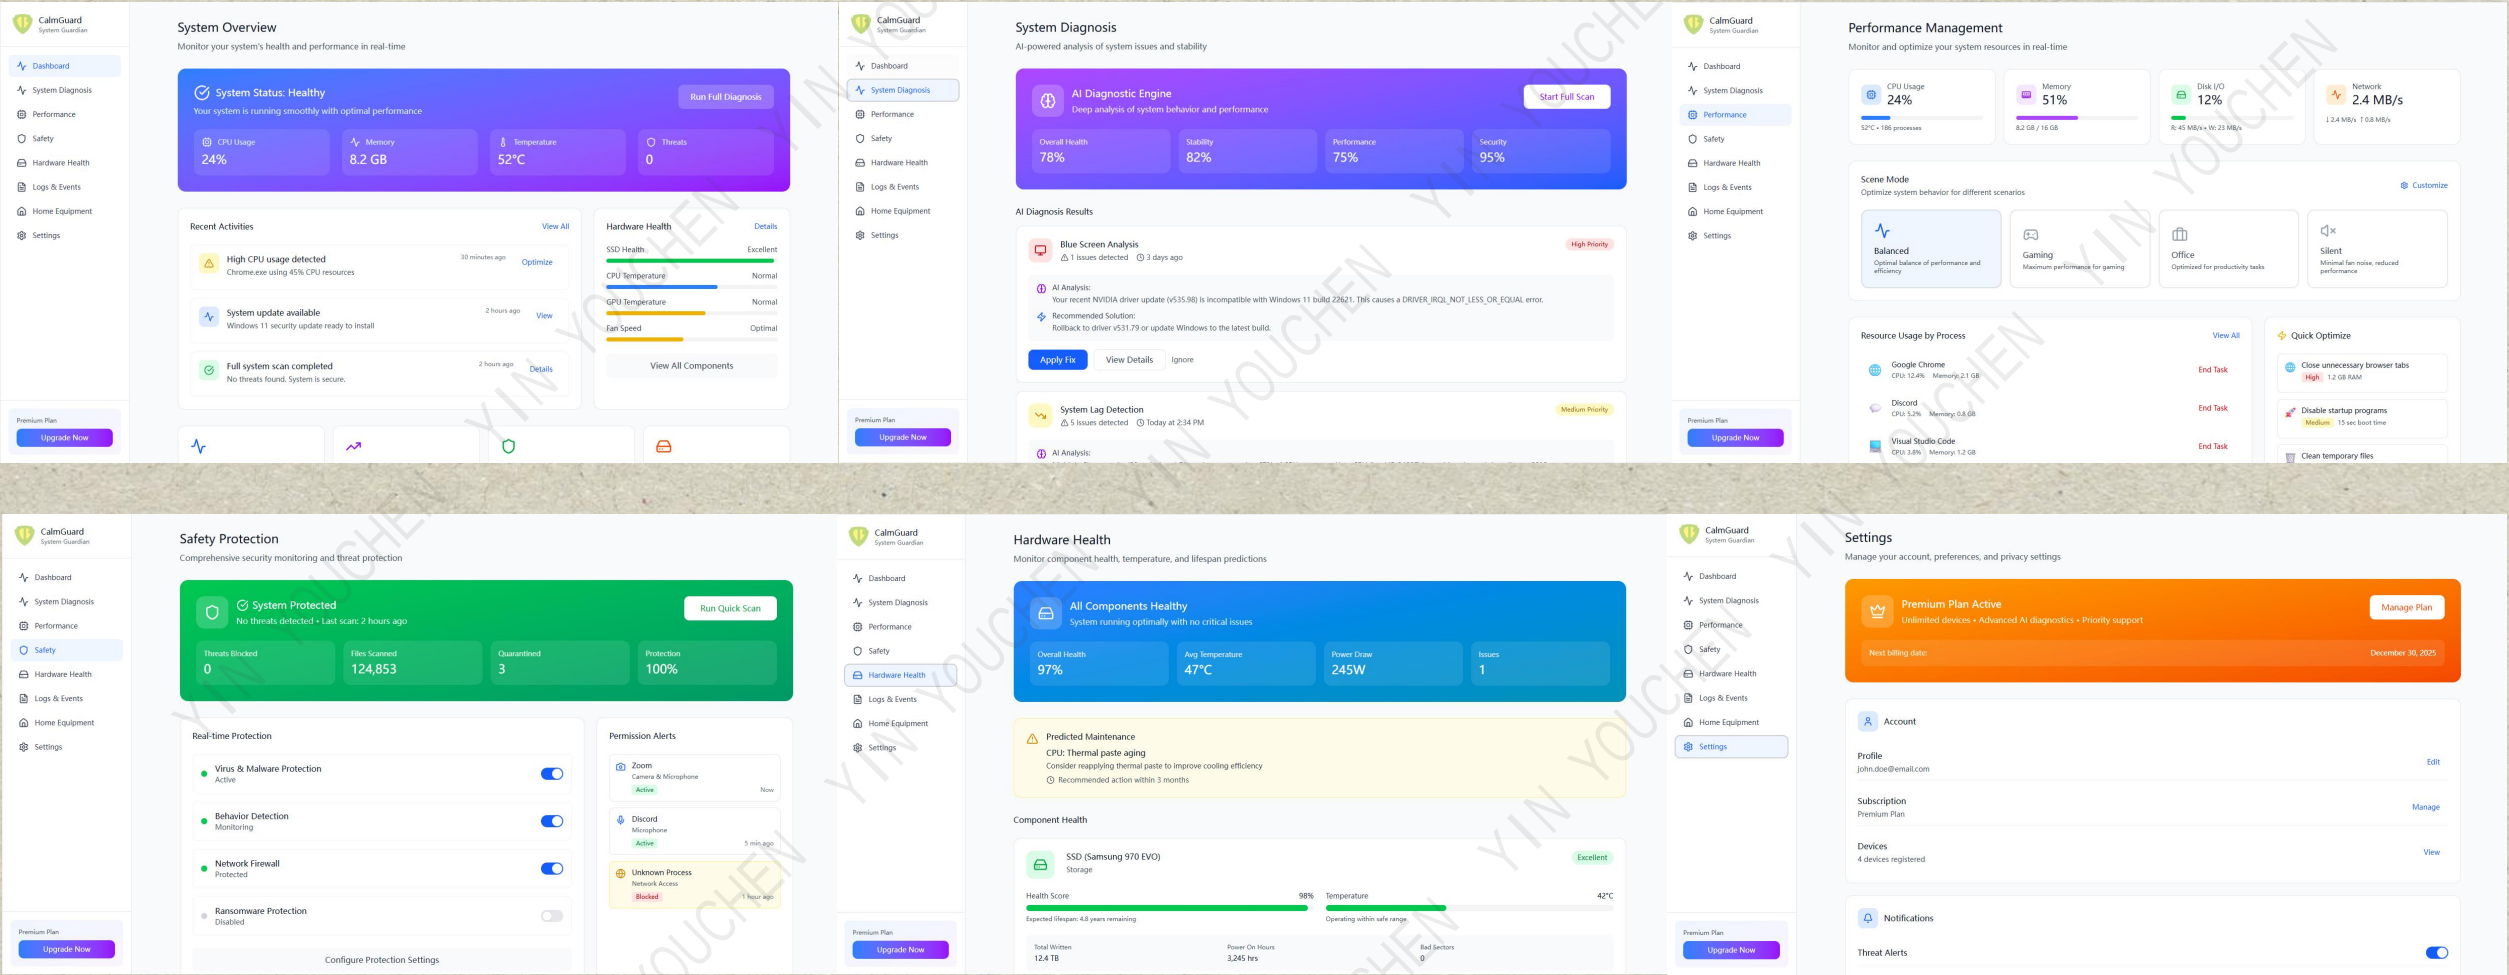

This design replaces electronic sensing systems with a simple physical structure, emphasizing humanistic innovation under low-tech conditions. It not only provides practical convenience for visually impaired individuals but also draws societal attention to "haptic cognition" and inclusive design, highlighting the temperature and significance of design interventions in social issues.

UI/UX设计

Next-generation system security and diagnostic app

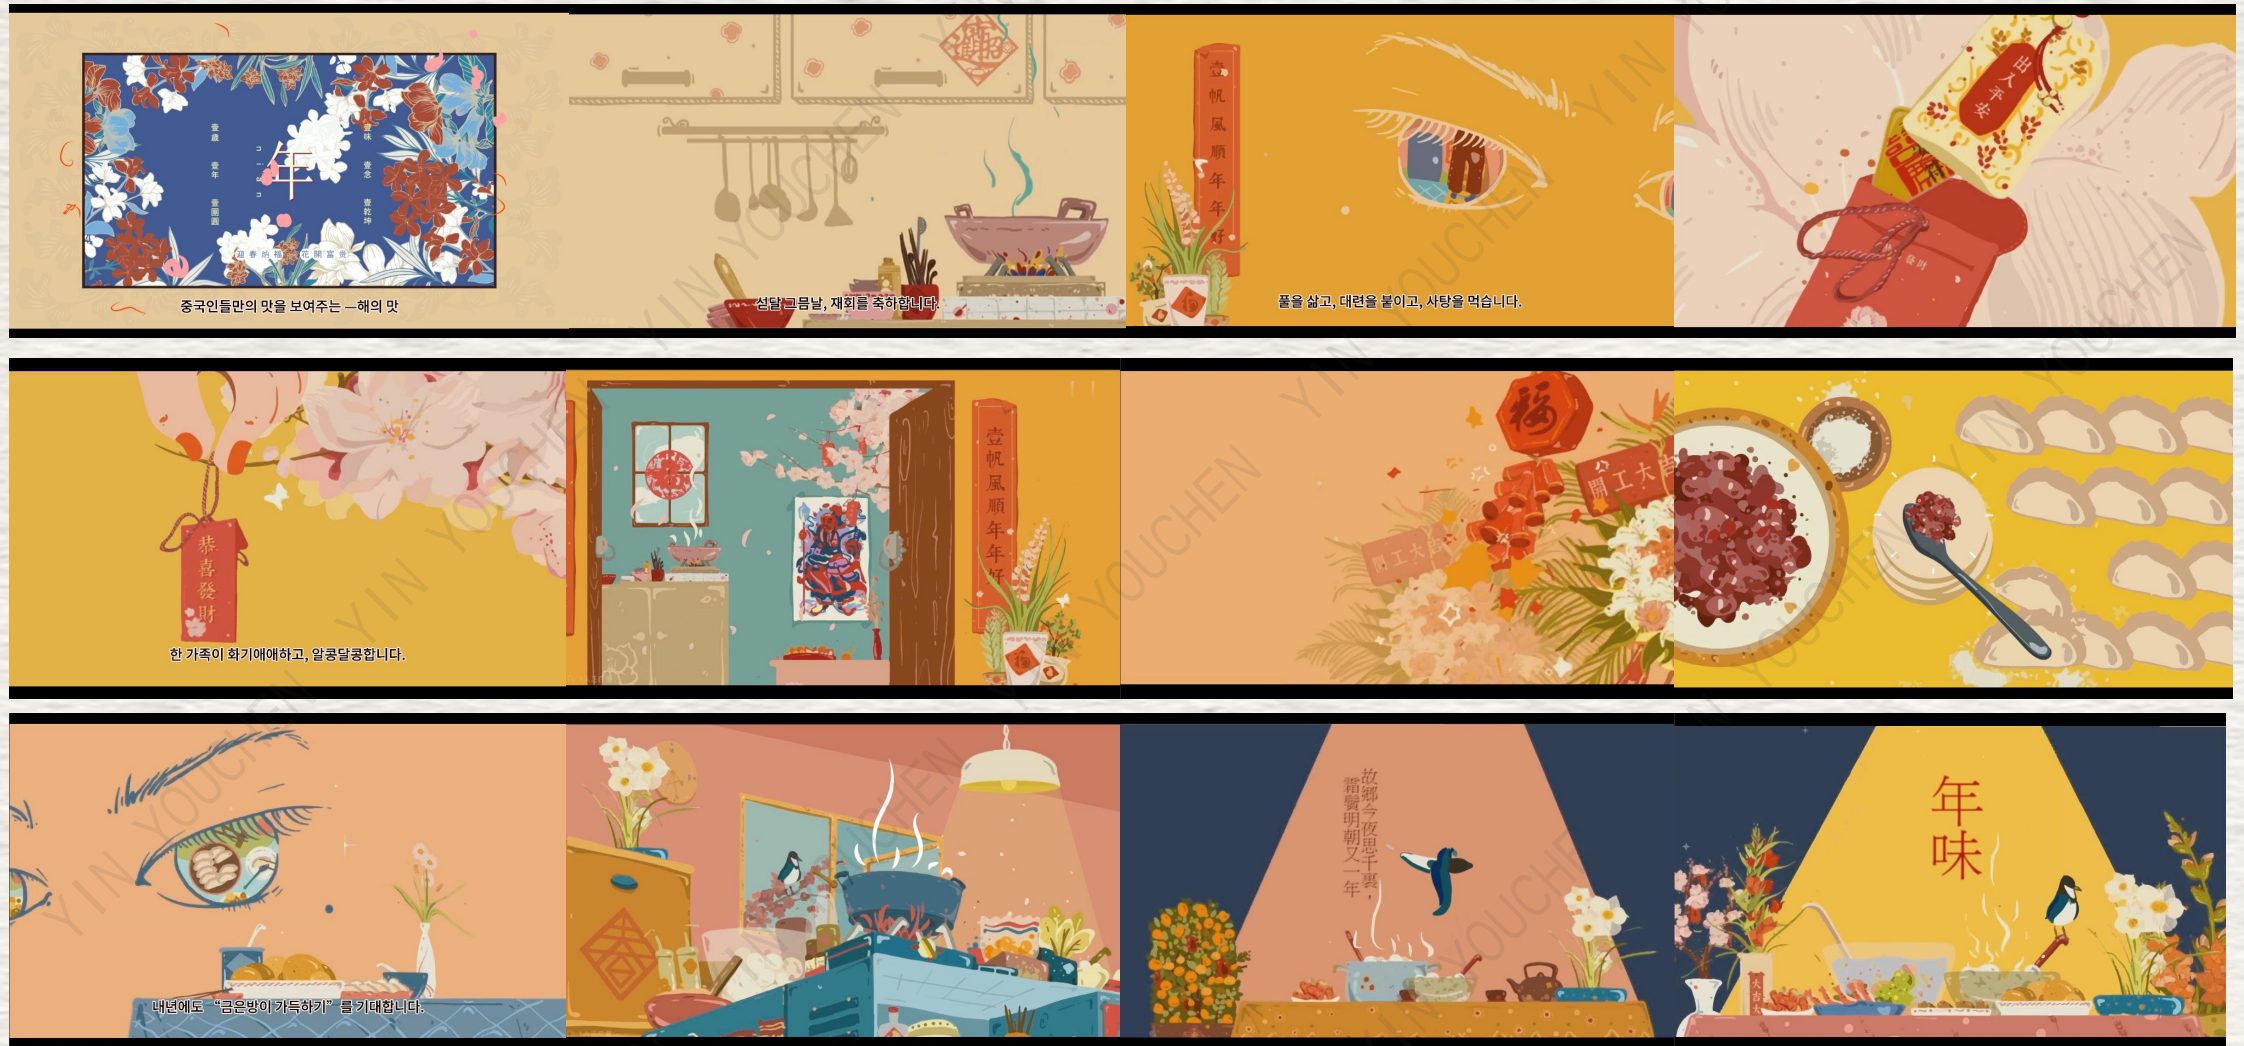

从杀毒软件升级为「电脑健康顾问」
解释电脑蓝屏、卡顿、掉帧等真实原因
通过AI辅助诊断，让用户真正理解系统状态
帮助用户维持电脑稳定性并减少问题
